

Question on promoting the use of solar energy
(Paper TAFEHC 4/2017)

Written reply of The Hongkong Electric Co., Ltd

The Hongkong Electric Co., Ltd (HK Electric) has established standard procedures to facilitate customer renewable energy systems grid connection, provided the projects satisfy the prevailing statutory safety requirements. Since 2009, about 70 customer renewable systems have been successfully connected to HK Electric's grid. Other than a 100kW system installed in a university campus, most these customer renewable energy systems are small with output helping reduce the customers' demand from our grid. To prepare for future developments, HK Electric has been discussing with the Government on various options to incentivize customer renewable energy installations.
