

Question on the readiness of Hong Kong - Zhuhai - Macao Bridge for commissioning
(Paper IDC 85/2017)

Written reply of Civil Engineering and Development Department

Reply to enquiry 5

The Planning, Engineering and Architectural Study for Topside Development at Hong Kong Boundary Crossing Facilities (HKBCF) Island of Hong Kong – Zhuhai – Macao Bridge will recommend the scale of proposed commercial development on the HKBCF Island through topside and underground space development.

Formulation of the draft Recommended Overall Development Plan (RODP) for the Topside Development is in progress. Land uses including retail, dining, entertainment; offices, hotels, logistic uses, etc. are being considered. Technical assessments of the proposed development option including the assessment of environmental and traffic impacts, etc. are underway.

A two-stage community engagement programme will be conducted under the study. The Stage 1 Community Engagement was accomplished in September 2015. We are fine-tuning the development plan taking into account of the public comments received. Subject to satisfactory conclusion of all technical assessments, we will proceed with the Stage 2 Community Engagement to consult the public on the draft RODP.
